CANADA - METEOROLOGICAL BRANCH - DEPARTMENT OF TRANSPORT

MONTHLY WEATHER MAP

October 1961

DEC 19 1961
WEATHER BUREAU

General Summary of Weather Conditions

October mean temperatures were above normal throughout the eastern provinces of Canada. The greatest excesses were in Nova Scotia where they ranged to five degrees, in the Eastern Townships and southern Ontario. Temperatures were not far from normal in the Prairie Provinces but in British Columbia there were deficiencies of two or three degrees. The coldest part of the country relative to normal was the Northwest Territories where there were negative anomalies of eight degrees at a few stations. Precipitation was much below normal in the southern parts of Ontario, Quebec and Manitoba, while there were excesses in the Maritime Provinces, the grain areas of Saskatchewan and Alberta, and most of British Columbia.

During the first and third weeks of October a ridge of high pressure just off the British Columbia coast blocked the passage of lows from the ocean resulting in dry, sunny weather over the province of British Columbia. During the second and fourth weeks Pacific storms moved inland and the weather was dull and stormy. At Cape St. James on the southern tip of the Queen Charlotte Islands winds of over thirty miles an hour were recorded on twenty-two days of the month, while a number of stations reported new record wind mileages for the month, Fort St. John and Prince George among others. For the month as a whole, precipitation was thirty to seventy per cent below normal in the southern interior valleys of the province, and not far from normal on Vancouver Island. There were precipitation excesses ranging to ninety per cent on the Fraser Delta, while in the central interior part of the province there were excesses ranging to eighty per cent, with one or two stations experiencing twice the normal fall.

Precipitation was heavy along the northern section of the British Columbia coast. The greatest amount of precipitation recorded anywhere in Canada for the month was 35.96 inches at Stewart which was about three times the normal fall. The second greatest was 31.77 inches at Falls River, 53 per cent above normal.

About the twentieth of the month, the first outbreak of Arctic air of the season brought a hard freeze to most sections of the province of British Columbia. For the month as a whole mean October temperatures were two to four degrees below normal in the southern sections of the province, and three to six degrees below normal in the northern section. In the central interior of the province most stations had mean temperatures close to normal values.

In the Prairie Provinces, October began with record low minimum temperatures at a number of stations in western Manitoba and eastern Saskatchewan on the first. A week later on October 6th, record maximum temperatures were recorded in western Manitoba, the high of 88 at Roland being the highest temperature attained in Canada during the month. Temperatures were mild again during the third week particularly on the 15th and 16th when many stations reported maximum temperatures in the 80's. A surge of Arctic air moved across the Prairie Provinces from the 19th bringing snow and cold weather to the whole area by the 21st. For the month as a whole temperatures averaged one or two degrees above normal in southern Manitoba and southeastern Saskatchewan, and one or two degrees below normal in the remainder of Saskatchewan and southern Alberta. There were deficiencies ranging to two or three degrees in the Edmonton area, and to six degrees at Keg River in the extreme northern part of the Peace River Valley.

Snowfall was plentiful throughout most of the Prairie Provinces during October. On October 7th a snowstorm brought snow to southern Alberta. Later on the 22nd an intense storm moved northward along the Manitoba - Saskatchewan border bringing heavy snow to Saskatchewan and northern Manitoba. This was one of the worst October snowstorms on record, particularly at Regina where eight inches fell. Snowfall totals for the month were 15 inches in Calgary while closer to the foothills, Edson had 29 inches and Pincher Creek 30 inches. Precipitation was much above normal throughout Alberta and most parts of Saskatchewan and, although the distribution was irregular, quite a number of stations reported over twice the normal fall. By contrast, precipitation was light in Manitoba and the southeastern corner of Saskatchewan. In the latter district a few stations received no precipitation at all.

October began with mild weather throughout the province of Ontario, persisting even in northern areas until the end of the second week, while in the southern part of the province temperatures remained warm till the last ten days of the month, when there was a gradual drop to more seasonable levels. Mean temperatures for the month were one to three degrees above normal in northern Ontario and three to six degrees above normal in southern Ontario, making it one of the warmest Octobers on record at a number of stations. At Toronto, where meteorological records date back to 1840, the month came within a fraction of a degree of tying for the distinction of being the warmest October on record with a mean of 55 degrees. Despite the mild weather in southern Ontario, the highest temperature in the province was reported from northern Ontario where both Graham and Atikokan had a maximum of 84 on the 6th.

Snowfall was virtually non-existent in southern Ontario in October but was much above normal in northern Ontario. While Timmins reported a total fall for the month of only two inches, Kapuskasing, northwest of it, had 15 inches while in the extreme northwest of the province, Lansdowne House reported 20 inches. Normals at the latter two stations are five and six inches respectively. Rainfall was deficient in all parts of the province, and the total precipitation was also generally below normal. In southern Ontario there were precipitation deficiencies of thirty to eighty per cent while in northern Ontario deficiencies ranged to fifty per cent. A few stations in Algoma, Cochrane and Patricia district reported precipitation excesses, of which the greatest was 76 per cent at Trout Lake.

October was exceptionally sunny, warm and dry in all regions of Quebec. Most stations reported their highest temperature of the month during the second week. During this period, Montreal mean temperatures were ten degrees above normal for the period. Although temperatures were warm, they failed to reach 80, the highest reported anywhere in the province being 79, reported from Shawville and St. Clothilde. Mean temperatures for the month were three to five degrees above normal in southern sections of the province of Quebec and about one degree above normal in the central interior and far northern sections of the province. Precipitation for the month was below normal at almost all stations in the province, deficiencies ranging to sixty per cent in the southern sections and to thirty per cent in the central interior. In the far north Port Harrison and Fort Chimo both experienced deficiencies, the latter of 87 per cent.

The province of Nova Scotia experienced above normal rainfall in October 1961 after eighteen months of below normal precipitation. The main cause of the rain was tropical storm Gerda which passed south of Nova Scotia on October 20th. It was followed a few days later by a low pressure area on the 25th which caused heavy thunderstorms and gave Halifax .83 inches of rain in one hour. Earlier in the month, hurricane Frances had threatened the area but dissipated rapidly causing only some rain and moderate winds. On October 15th, four to six inches of snow fell in northwestern New Brunswick with smaller amounts over the rest of the province. October precipitation was almost twice normal in the central part of Nova Scotia. At Spruce Hill Lake the total was 11.85 inches, the greatest in eastern Canada for the month. On Prince Edward Island and along the Bay of Fundy shore there were excesses of fifty per cent while in the interior of New Brunswick there were deficiencies ranging to forty per cent along the part of the Saint John River above Woodstock.

October temperatures were generally mild in the Maritime Provinces, with no general frost occurring until the 16th, when an influx of Arctic air behind the snowstorm of the 15th set new low maximum records for the date at Fredericton and Chatham. For the month as a whole temperatures averaged three to five degrees above normal throughout the area.

No major storms affected the Island of Newfoundland during October 1961 and the weather was generally warm and pleasant throughout the month. At Gander and at St. John's Airport the mean temperatures were the highest on record for October. Throughout the Island, mean temperatures were three to five degrees above normal. Precipitation was light in the southeastern corner of the island with deficiencies at Grand Bank, Gander and Torbay but elsewhere on the island there were excesses which ranged to fifty per cent in inland regions and to over one hundred per cent along the west coast.

Along the Labrador coast, October mean temperatures were one or two degrees above normal. Precipitation was much above normal with Goose Bay reporting twice and Cape Harrison over four times the normal fall.

In the Yukon Territory, October was cool, mean temperatures ranging from two to seven degrees below normal. Precipitation was somewhat above normal with excesses ranging from twenty-five to seventy per cent except at Watson Lake where there was over twice the normal fall.

In the Northwest Territories, October mean temperatures were below normal in all sections. On the mainland part of the territory, temperature deficiencies ranged to eight degrees, the greatest reported anywhere in Canada during the month. On the Arctic Archipelago there were temperature deficiencies of two to five degrees with exceptions at Alert, where there was a one degree excess, and the stations near Hudson Strait, where there were also excesses, of which the greatest was three degrees at Nottingham Island.

There were precipitation deficiencies at Fort Good Hope and Coppermine, but all other stations in the districts of Mackenzie and Keewatin experienced precipitation excesses, with stations along the southern edge receiving more than twice the normal fall. There were deficiencies of about eighty per cent on the northern half of Baffin Island and of forty per cent at Alert, but the other sections of the Arctic Archipelago experienced precipitation excesses of variable amounts, of which the greatest was at Frobisher Bay where over three times the normal fall was experienced.

OCTOBER 1961
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:

MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.

The remaining columns give the following information:

PRECIP. The total precipitation in inches for the month, including the rainfall and the equivalent of the snowfall.
SUN The total bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches, lying on the ground at the end of the month, (when reported).

The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
